

Nothing better since the
invention of
THE WHEEL !!

Dear Consumer:

Texas Roll-Back Trailers, Inc. would like to acquaint you with the finest trailer on the market today.

***Texas Roll-Back Trailers, Inc.* has specialized in this one design since 1990, with tremendous success. Solid steel rollers, on three tracks, are built into the chassis which supports the deck. This allows the deck to move separately from the chassis, giving the user an ease in loading or unloading which is unparalleled.**

When the spring-loaded locking pins are released and the trailer brakes are engaged, the deck is free to roll backwards (as the tow vehicle is backed up) and down to the surface, giving the user a 5 degree deck angle to load or unload a vehicle or cargo. The trailer is remarkably versatile.

After loading or unloading, the user reverses the procedure by locking the trailer brakes and pulling the tow vehicle forward. This enables the deck to move forward until it touches the stops. When the lock pins are engaged, the trailer is ready for towing.

Remember: Our trailer is a true “roll-back”.

NO RAMPS, NO HYDRAULICS, NO ELECTRIC WINCHES, NO DANGEROUS TILT BEDS!

Call us at 1-505-649-3499 and one of our sales representatives will be happy to answer any questions you might have about our product or dealer program.

E:mail LSNGSRVCS@aol.com:

Texas Roll-Back Trailers, Inc. began building the finest automobile hauler in the towing industry in 1990.

Within the growing population of car enthusiasts, it became apparent that a change was needed. More and more vehicles presented their owners with the dilemma of low stances and running gear clearance problems, not to mention the physical efforts required to set-up and load ramp type trailers. With these older trailers, ramp and clearance problems could not be overcome. Ramp, dovetail and tilt-bed trailers still present the same problems with loading and unloading.

The design of the *Texas Roll-Back Trailer* allows loading and unloading capabilities never before realized. The unique design of this trailer offers every user the ultimate in towing ease. The trailer is sleek in design, and takes car hauling into the 21st Century. We recently introduced our *Aluminum Car Hauler* trailers for our customers that desire a lighter and more corrosion resistant trailer, and our *Universal Model* to cover the “Heavier” requirements of towing.

As *Texas Roll-Back Trailers, Inc.* became a major producer of car haulers, other industries recognized it’s capabilities. Because “*ALL*” of our trailers are bumper pull units, not requiring a special tow truck, they are perfect for businesses that specialize in towing, fork lift users, farm equipment owners, wrecker services, dealer transfers, and the average consumer.
